Tool description

This tool is supposed to hold cell phones. I think this tool is pretty good to solve my problem that when I am doing some works, I have no hand to hold my phone to take a video call. Or when I am eating my dinner, and I want to watch movies on my phone. It is very convenient for me in my daily life. Also, my roommate put their iPhone or Samsung on the holder and they still fit very well. I have two suggestions for this phone holder. First, it could be more customized such as the façade. I like the simple and clean design. However, if this holder is for a teenager or a child, it maybe a little bit boring for them. They may want to make the holder look like a character from cartoon. Second, the angle of the holder is too straight. Sometimes when the daylight reflects on the phone screen, I cannot see the images very clear. I hope it could be more flexible on the angle of the holder, and make the user have more choice to decide which angle is better for them in different light condition.
